## SKILLS

### Languages

- TypeScript
- JavaScript
- HTML & CSS
- SQL
- C#
- Rust

### Technologies

- React 16.8
- Node.js
- .NET Core
- Lerna
- Docker
- PostgreSQL

## EXPERIENCE

### Tempus | Chicago, IL

September 2020 - Current

#### Senior Software Engineer

- Worked in a team of 3 on Tempus' UI component library (React, TypeScript) of over 50 design system-adherent components, consumed by 43 other engineering teams throughout the company.
- Worked in team of 8 on web application (React, TypeScript, NodeJS) to model lab management processes for the conversion of human tissue into sequenced DNA.
- Contributed to architectural design and implementation that would allow lab processes to be modeled in multiple labs at different locations, enabling Tempus to increase its lab throughput by 30%.

### Fora Financial | New York, NY

January 2020 - September 2020

#### Software Engineer

- Designed and implemented features for a .NET transaction recording application to automate company lending processes. Focused on SQL Server query performance, deal lifecycle, and microservice migration.
- Added React.js (TypeScript) frontend to the application, speeding up average completion time of common user flows by 20% by reducing the number of server-side calls.

### Mastercard | New York, NY

July 2017 - January 2020

#### Software Quality Engineer

- Collaborated in a team of 8 to design and implement a web application (React, .NET) to provide data visualizations using the Mastercard transaction log that would enable financial institutions to make data-driven decisions. Focused on automated testing.

## PORTFOLIO

### React UI Component Library

- Designed a responsive component library in React focusing on system adherence and configurability.
- High-level design decisions could be made up-front like color, spacing, and typography, which would propagate to all components while still allowing one-off departures.

### Hierarchical Clustering of Google Maps Locations

- .NET application to read the KML exported Google Maps locations, perform agglomerative hierarchical clustering, and display the information on a React frontend with persistence in Postgres. Held-Karp algorithm is used to show optimal paths between locations within a cluster.

## EDUCATION

### University of Virginia | Charlottesville, VA

Graduated May 2017

B.S. in Chemical Engineering, Minor in Engineering Business
